

# Sectoral Investment

## Investments in India

# Sectoral Investments across Districts in India (2014-18)

This document presents information on investments<sup>1</sup> made in India from January 2014 to December 2018. The data set provides information on the level of investments made by various private sector entities and government institutions across the years at state, district and sector/industry levels. The total value of investments aggregated for all districts and all sectors during 2014-2018 is Rs. 1,86,75,061 crore.

The data corresponds to new investments of at least Rs. 1 crore in value in construction of new units and substantial expansion in existing units. These investments have either been completed or are under-implementation. The sector names from the investments database were mapped to various Sector Skill Councils (SSCs) and the resulting sector names have been used to depict investment levels in this document.

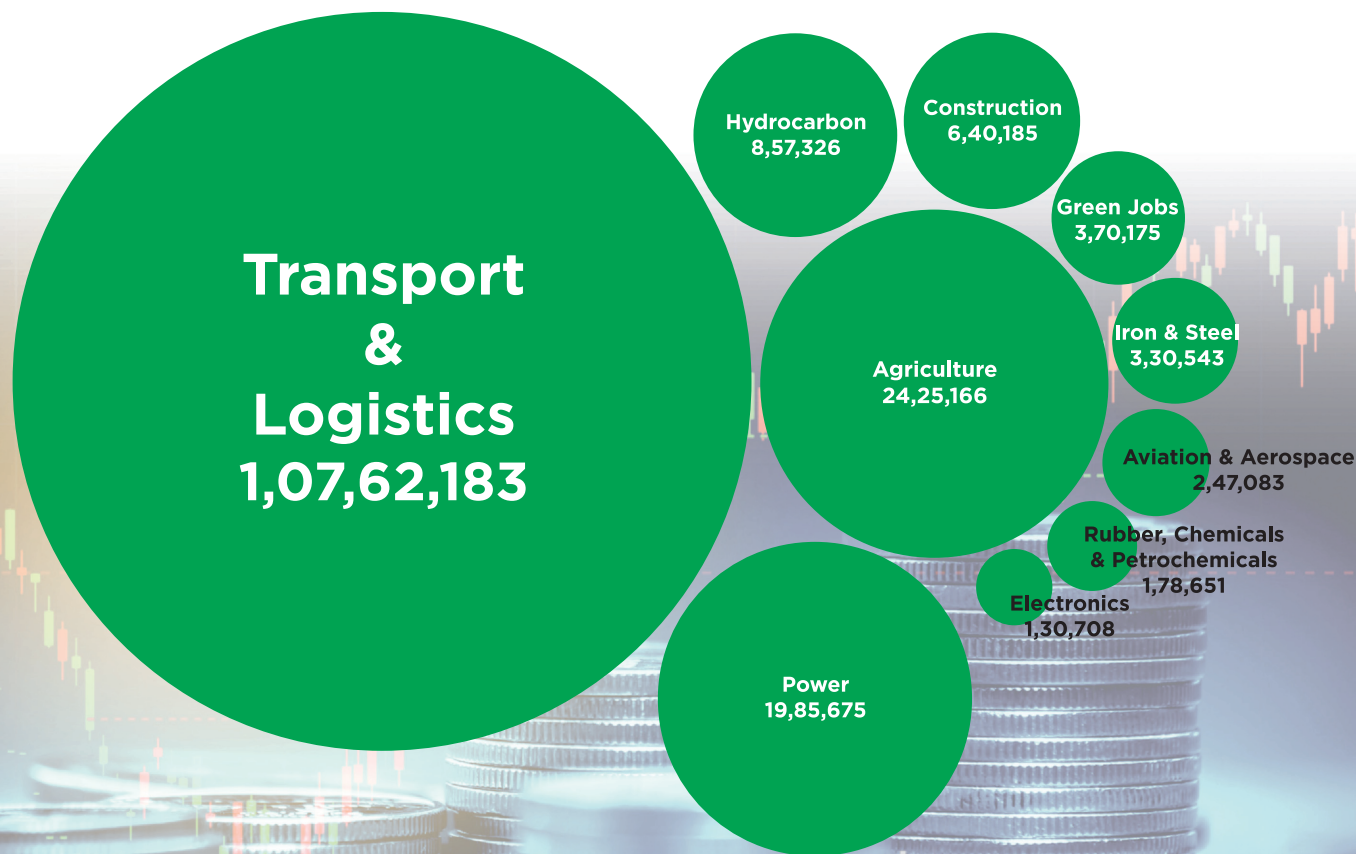

On page-2, the figure shows how total investments are disaggregated into various sectors for the top 10 sectors (w.r.t total investments). Larger the bubble size, larger is the investment in the respective sector (investment values are provided for each sector). From page-3 onwards, maps are shown depicting investment levels within each sector. Larger the bubble-size in a map, larger is the investment made in the respective sector. The legends in each map show the bubble sizes corresponding to the lowest, median and highest investment values in the respective sector. For each of the maps, tables are provided showing the names of top investors and the top districts for the investments corresponding to each sector.
